

[3:6] cycle: collection, transport, treatment, recycling
disposal

Incineration Pros: reduce waste, produces
energy

Cons: Pollution and high cost

[3:7]

Reduces pollution, save energy, reduces cost
and improves company image

[3:8] 1) energy saving.

2) water saving.

3) good materials.

4) water reduction.

5) indoor air quality.

6) Site Sustainability.

7) renewable energy.

3.1 it includes reduce, reuse, recycle, recovery and disposal. The goal is to reduce waste and protect the environment.

3.2 wind turns turbine to produce electricity.

Types: horizontal and vertical turbines

Advantages: clean and renewable

Disadvantages: depends on wind, expensive, noise.

3.3 Natural light reduces energy use and affects building design, windows, and orientation

STORES

3.4 wind speed, air density, and blade area
$$\text{wind power} = 0.5 \times \text{air density} \times \text{area} \times \text{wind speed}^3$$

3.5 Light can be controlled by intensity, color and direction LED save energy, lasts long, is eco-friendly
